REVENUE MODEL — 10 STREAMS **PITCH GUIDE** — 12-SLIDE DECK

PATENTS — 3 PROVISIONAL FILINGS **CONFIDENTIAL** — APRIL 2026

The Billion-Dollar Revenue Engine

GigRider leverages its position at the intersection of riders, platforms, restaurants, and financial institutions to create a multi-layered monetization engine that grows exponentially with network effects.

#	REVENUE STREAM	HOW IT WORKS	MONTHLY (5M RIDERS)	MARGIN
01	Freemium Tiers	Free / Pro Rs 299 / Elite Rs 799 / Fleet Rs 1,999 per month	**Rs 27.9 Cr**	85-90%
02	Commission per Order	2% transaction fee on every order accepted through GigRider	**Rs 187.5 Cr**	70-80%
03	Financial Services	Micro-loans, insurance, savings — riders are financially underserved	**Rs 35 Cr**	40-60%
04	Data Monetization	Anonymized delivery analytics for restaurants and enterprises	**Rs 12.5 Cr**	90-95%
05	B2B Enterprise API	License aggregation technology to restaurant chains via SaaS	**Rs 15 Cr**	85-95%
06	White-Label Licensing	License to international partners with setup fee + revenue share	**Rs 8 Cr**	80-90%
07	Advertising	Sponsored orders, banner ads, partner push notifications	**Rs 10 Cr**	75-85%
08	Rider Marketplace	Direct restaurant-rider connect with 5-8% transaction fee	**Rs 22.5 Cr**	60-70%
09	Training & Certification	Paid courses, tax filing, and legal document services	**Rs 3 Cr**	85-90%
10	Referral Partnerships	Commission from fuel, telecom, and vehicle service partners	**Rs 20 Cr**	70-80%
	TOTAL MONTHLY		**Rs 341.4 Cr**

REVENUE DEEP DIVE

How Each Stream Works

Every revenue stream is designed so that GigRider only earns when riders earn more — creating a self-reinforcing flywheel of growth and trust.

01 — Freemium Subscriptions

Free tier ensures maximum adoption and network effects. Pro (Rs 299/mo) unlocks Auto-Rank, Smart Stack, and countdown timers. Elite (Rs 799/mo) adds financial services, auto-accept rules, and tax filing. Fleet (Rs 1,999/mo) serves fleet operators managing 5+ riders with analytics dashboards.

Rs 27.9 Cr /MONTH

02 — Commission per Order

The single largest revenue stream. A 2% fee on every order is negligible for riders who save time and fuel, but at massive scale generates Rs 187.5 Crore monthly. Riders earn 15-25% more even after the fee, making this a win-win proposition that aligns incentives perfectly.

Rs 187.5 Cr /MONTH

03 — Financial Services

Delivery riders are the most underserved demographic in finance. Micro-loans (Rs 50-80K for vehicle purchase at 18-24% interest), pay-per-trip accident insurance (Rs 5-10/day), and auto-savings wallets. GigRider's real-time earnings data enables credit scoring no bank can match.

Rs 35 Cr /MONTH

04 — Data Monetization

Aggregated, anonymized delivery intelligence sold as subscriptions: city-level analytics for restaurant chains (Rs 5-25K/mo), demand heatmaps for dark kitchens (Rs 10-50K/mo), custom research for investors (Rs 1-5 Lakh), and platform intelligence products (Rs 50K-2L/mo). 90%+ margins.

Rs 12.5 Cr /MONTH

05 — B2B Enterprise API

The core aggregation technology is a product in itself. Restaurant chains, cloud kitchens, and new delivery platforms need a unified API to interact with multiple platforms. Per-call fees (Rs 0.50-2.00), monthly SaaS subscriptions (Rs 10K-1L/mo), and custom enterprise contracts (Rs 5-20L/year).

Rs 15 Cr /MONTH

06 — White-Label Licensing

The rider aggregation problem exists in every country. License technology to local partners with Rs 20-50 Lakh setup fee, 15-25% revenue share, and Rs 5-15 Lakh annual maintenance. 20 international partners generate Rs 4-10 Cr upfront plus Rs 10-25 Cr annually.

Rs 8 Cr /MONTH

07 — Advertising

The home screen is prime real estate viewed dozens of times daily. Sponsored order placement (Rs 5-20 per order), banner ads on earnings screen (Rs 50K-2L/mo per city), push notification partnerships (Rs 2-5 per click), and branded vehicle decals (Rs 500-1,500/mo per rider).

Rs 10 Cr /MONTH

08 — Rider Marketplace

Direct restaurant-rider connection bypassing delivery platforms entirely. GigRider charges 5-8% vs. platforms' 20-30%. Creates powerful network effects: more restaurants attract more riders, more riders attract more restaurants. 10K restaurants at 20 orders/day generates Rs 4.5 Cr monthly.

Rs 22.5 Cr /MONTH

09 — Training & Certification

Paid courses: Food Safety Certification (Rs 499), Route Optimization (Rs 299), Financial Literacy (Rs 149). Tax filing services (Rs 499-999), GST registration (Rs 1,499), and legal document services. 100K enrollments/year at Rs 350 average generates Rs 3.5 Cr annually with very high margins.

Rs 3 Cr /MONTH

10 — Referral Partnerships

Riders spend Rs 3,000+/month on fuel and Rs 500 on mobile recharges. Partner with telecom companies, petrol pumps, service centers, and equipment brands for 3-10% commission. 200K riders using partner services generates Rs 2.1-7 Crore monthly commission revenue.

Rs 20 Cr /MONTH

12-Slide Pitch Deck Guide

Each slide serves a specific purpose in building investor understanding and excitement. Tell a story they can feel.

SLIDE 01
Title & Hook
Open with "One App. Every Order. More Money." Old Money aesthetic. First 30 seconds decide everything.

SLIDE 02
The Problem
15M riders juggling 2-4 phones. 30% orders missed. Rs 200-500 lost daily. Show the pain vividly.

SLIDE 03
The Solution
Live Order Feed, Auto-Rank, Smart Stack. One phone, all platforms. Show the magic moment.

SLIDE 04
Market Size
TAM: USD 120B. SAM: USD 30B India+SE Asia. SOM: USD 3B achievable in 5 years.

SLIDE 05
Business Model
10 streams. Commission (55%) + Subscriptions (8%) + Fintech (10%) + Marketplace (7%) drive 80%.

SLIDE 06
Traction
Prototype built. Auth ready. Core features functional. Revenue model validated. Patent pending.

SLIDE 07
Competitive Landscape
No multi-platform aggregator at scale. Para acquired by DoorDash (USD 50M+) validated the space.

SLIDE 08
Go-to-Market
Phase 1: 3 cities, 50K riders. Phase 2: 15 cities + fintech. Phase 3: International. Viral: 5x.

SLIDE 09
Team
Technical capability, financial acumen, legal awareness. Investors bet on people, not just ideas.

SLIDE 10
Projections
Y1: Rs 8 Cr. Y3: Rs 250 Cr. Y5: Rs 2,500 Cr. Breakeven Y2. Fintech revenue has 12-18 month lag.

SLIDE 11
The Ask
Rs 25 Cr (USD 3M) seed for 10% equity. 40% eng, 25% acquisition, 20% fintech, 15% ops.

SLIDE 12
Closing Vision
"GigRider: the operating system for 50 million delivery riders worldwide." Make it feel inevitable.

Live Demo Flow

STEP	SCREEN	WHAT TO SAY
1	Splash Screen	"This is GigRider. Let me show you how it works for a real rider."
2	Login + OTP	"Riders log in with phone number. Simple, familiar, fast."
3	Home Screen	"Here's the magic: orders from Swiggy, Zomato, Uber Eats in ONE feed."
4	Auto-Rank	"One tap reorders the feed so the highest-earning, closest orders are on top."
5	Smart Stack	"Groups nearby deliveries together. More money, less fuel."
6	Earnings	"All earnings across platforms in one view. No more checking four apps."
7	Financial Services	"Insurance, loans, savings — all accessible because we know earnings in real-time."

Anticipated Tough Questions

Won't delivery platforms block GigRider?

GigRider is a rider productivity tool, not a competing platform. We aggregate notifications riders already receive on their own devices. Legally, this is equivalent to a notification manager. Precedent: Para operated the same model in the US and was acquired by DoorDash for USD 50M+. Platforms benefit from riders who complete more deliveries, creating alignment of interests.

How do you prevent the commission from alienating riders?

Riders earn 15-25% more using GigRider. Even after a 2% commission, net income increases by 13-23%. We demonstrate this with an "Earnings Boost" counter in the app. Riders who see Rs 500 extra daily earnings happily pay Rs 5 per order. The Free tier pays zero commission.

What about platforms building their own multi-app features?

No platform will help riders use a competitor. Swiggy will never show Zomato orders. This structural conflict of interest means multi-platform aggregation can only come from a neutral third party. GigRider's neutrality is its moat. Riders also won't trust a platform to fairly rank competitor orders.

How do you verify the financial projections?

Benchmarked against Paytm/PhonePe (commission models), BharatPe/KreditBee (gig worker lending), and Razorpay/BillDesk (per-transaction API fees). We use conservative conversion rates (12% vs. industry 15-20%), conservative commission (2% vs. potential 3-5%), and linear growth vs. exponential growth seen in ride-hailing.

10 Numbers Every Investor Remembers

METRIC	VALUE	WHY IT MATTERS
Delivery riders in India	**15 million**	Massive addressable user base
Orders missed per rider/day	**8-12 (30%)**	Quantifies the problem
GigRider earnings uplift	**15-25%**	Proves value with hard numbers
Year 5 projected revenue	**Rs 2,500 Cr**	Billion-dollar trajectory
Commission at 5M riders	**Rs 187.5 Cr/mo**	Single largest stream, scalable
Breakeven timeline	**18-24 months**	Capital-efficient path
Rider referral viral coefficient	**5x**	Organic growth reduces CAC
Para acquisition by DoorDash	**USD 50M+**	Validates the space
Platform commission on restaurants	**20-30%**	Our 2% is 10-15x cheaper
Gig economy CAGR (2024-2030)	**25% annually**	Market tailwind

Three Patent Applications

Three patents create three walls around your moat. Competitors cannot simply design around one.

PATENT I

Multi-Platform Delivery Order Aggregation & Prioritization

Core system for intercepting notifications from multiple delivery platforms, normalizing data into a unified structure (UODS), and ranking orders using a multi-variable algorithm with 6 weighted factors: earnings per km, earnings per minute, countdown urgency, pickup proximity, platform reliability, and rider history. Includes adaptive weight adjustment through machine learning feedback loop.

PATENT II

Multi-Platform Gig Credit Scoring (MPGCS)

Credit scoring system (300-900 range) using cross-platform delivery performance data: order completion rate (20%), earnings stability index (20%), on-time delivery rate (15%), working consistency index (15%), platform diversity score (10%), customer satisfaction composite (10%), and tenure factor (10%). Enables automated loan origination and insurance underwriting.

PATENT III

Geographic Delivery Batching Across Independent Platforms

Smart Stack technology identifying batchable orders across platforms using Haversine proximity detection (2km pickup, 3km delivery thresholds), modified TSP route optimization with real-time traffic data, and Stack Score computation measuring efficiency gain of batched vs. individual delivery routes.

Immediate Action Plan

1. **File provisional patents TODAY** at ipindiaonline.gov.in. Cost: Rs 1,600/patent. Get "Patent Pending" status immediately.
2. **Have investors sign NDA** before any demo. Template available in patent document.
3. **Present with confidence.** Say "patent-pending proprietary technology." Never reveal algorithm internals.
4. **Within 12 months:** File complete specs with attorney (Rs 30-80K/patent) and PCT international applications.

NDA Ready

Comprehensive NDA template prepared covering: confidential information definition, receiving party obligations, 3-year term with 5-year survival clause, injunctive relief remedies, and Indian jurisdiction. Available in the patent specifications document.

COST SUMMARY

3 Provisional filings (startup): Rs 4,800

Patent attorney (complete, x3): Rs 90K-2.4L

PCT international (x3): Rs 1.5-3L

Total (India + PCT): **Rs 2.4-5.4L**

DELIVERY TIPS

- **Start with energy.** First 30 seconds set the tone. Make them feel the rider's pain before showing the solution.
- **Use the demo as your weapon.** Nothing convinces like seeing the product work. Practice 10+ times.
- **Own the numbers.** If someone asks about unit economics at 1M riders, you should calculate it on the

spot.

- **Close with conviction.** The ask is not the time for uncertainty. State it like the most obvious decision in the world.
